# VisionPro

## TechConnect Universal AV wall facility plate with cables.

The VisionPro TechConnect is all you need to complete a professional AV installation. The box contains a comprehensive set of cables, a standard UK double-gang backbox, and a modular faceplate allowing you to build a custom connector configuration. What else do you need!? We have also made your job quicker and easier by preparing the cables for you; One end of each cable has a plastic moulded plug for direct connection to your AV equipment, and the other end has pre-tinned cores ready to be screwed into the phoenix connectors on the faceplate.

Installation steps:

- 1) Connect the pre-moulded connectors to the AV source/display equipment.
- 2) Run all the cables back to the faceplate.No connectors on the cable makes it easy to pull cable through tight spots.
- 3) Screw the bare wires into the back of the faceplate.If there is excess cable it can either be hidden in a hollow ceiling or wall, or the cable can be cut down to length.
