

# senteo™ interactive response system

## The Senteo interactive response system

With the Senteo™ interactive response system, you no longer have to wonder if students understand what you've taught them. They can tell you with the click of a button.

Senteo provides a direct connection between you and your students, and gives you instant feedback on whether your students are following your instruction. This highly intuitive system includes a remote for each student in your class, a central receiver and powerful software that allows you to quiz, survey and assess.

## Create stimulating questions

Because Senteo comes with SMART's Notebook™ collaborative learning software, it enables you to create dynamic questions that can be incorporated directly into pre-existing lessons.

The system's range of answer formats – from true or false to more-than-one right answer – makes it easy for teachers to ask questions that assess multiple levels of learning.

Taking questions to higher levels is even easier because of the Senteo interactive response system's integration with Notebook software. Incorporate any of 6,000 learning objects into your quizzes, or use them to animate corresponding lesson plans created with Notebook. Choose from videos, maps and images to give questions the depth and clarity that spark diverse forms of learning.

## Formative and summative assessment

Pose a question before, during or after a lesson to find out if students are on track, and use that feedback to help shape the rest of your lesson. Did everyone understand what a simile is? Do all the students know how to multiply fractions? You know immediately if you need to re-emphasize a concept.

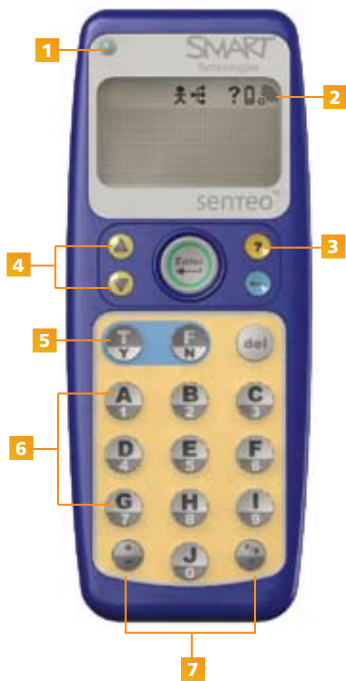

Once you've finished the lesson, you can create a quiz with Senteo to evaluate learning more formally, and feel secure in summative assessments because students can verify and change their self-paced responses directly on the remote.

By providing instant feedback and enriching your questions, the Senteo interactive response system increases the vital one-to-one interaction in your classroom. Never has gauging and improving understanding been easier.

# Factsheet

**Senteo helps gauge and foster learning  
– with the click of a button.**

## Features

- 1 Power on/off
- 2 Descriptive icons indicate battery power and network status
- 3 Allows students to ask questions
- 4 Students can scroll through questions
- 5 Yes/no, true/false
- 6 Supports up to 10 multiple choice responses
- 7 Fraction and decimal support for positive and negative numeric questions

## Key features

### Remote

- **Radio frequency technology** - The radio frequency technology (RF) for the Senteo interactive response system remote is reliable and convenient. You don't need a line of sight to deliver questions or send answers, and the remote has a range of up to 100 ft. (30 m).
- **Large LCD screen** - The large screen is easy to read and has room to display three lines of text. Students can scroll through questions and find out instantly if their responses have been sent.
- **Descriptive icons** - Conveniently displayed icons on the LCD screen tell students the battery power and network status.
- **Ergonomic design** - The handheld remote is designed to fit comfortably in young hands, and the 21 input buttons are conveniently located and easy to use.
- **Extended battery life** - Each remote uses two AA batteries, which are long-lasting and easy to replace.

### Receiver

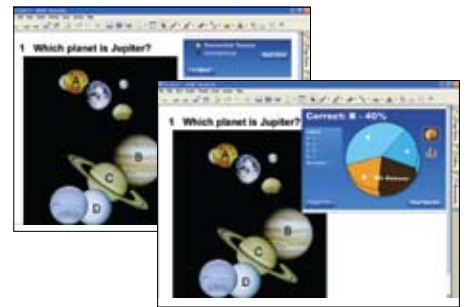

- **Convenient connection** - The receiver hooks up easily through a USB connection and doesn't need an additional power adaptor.
- **Flexible installation** - The receiver can be either mounted on a wall or placed on a desk.
- **Convenient maintenance features** - LED lights indicate power status and whether information has been sent or received.

### Flexible package options to fit your class size

- The Senteo interactive response system includes a receiver and remotes, and is available in 24- or 32-unit packages.

### Cross-platform support

- Compatible with both Microsoft® Windows® and Mac OS operating systems. For full system requirements, please visit [www.smarttech.com/senteo](http://www.smarttech.com/senteo).

## Software

The Senteo interactive response system is fully integrated with SMART's Notebook software, so it links you to numerous education resources.

### Notebook software resources

- Use the graphic-rich learning objects available in Notebook software to build dynamic questions with images and other multimedia content.

### Flexible assessment options

- Compile tests for formative and summative assessment. The Senteo interactive response system allows you to prepare quizzes in advance and ask ad-hoc questions to gauge students' knowledge level at any point during a lesson.

### Question variety

- Ask different types of questions, including true or false, yes or no, multiple choice, numeric response and more-than-one right answer. You can also incorporate decimals, fractions and negative numbers into questions.

### Instant feedback

- Find out instantly how well students have understood what you've taught them. You can choose to get feedback in a bar graph or pie chart that summarizes the results from one question or all of them. You can also see responses from individual students to help you personalize learning.

### Import and export using other software

- Senteo is fully compatible with Microsoft software applications. You can import questions from Microsoft Word or questions in XML format. Senteo also integrates with PowerPoint® presentation software.

### Export results for grading and record keeping

- Senteo allows you to export quiz answers to Excel® spreadsheet software for use with gradebook software.

### Print quizzes and study guides

- Senteo allows you to print quizzes as handouts so students can complete them at their own pace. You can also print test summaries showing individual students which questions they answered correctly or incorrectly. The summaries can be enhanced with teacher comments and used as study guides.
